EXPERIENCE

EggscapE Entertainment Inc.

Senior Unity Developer · Port Lead (PICO & Steam)

May 2023 – Jul 2026

Buenos Aires, Argentina — On-site, later hybrid

Last engineer on the project — studio funding ended

- Shipped **EGGSCAPE** — demoed on Meta's GDC 2024 stand; XR Standout Winner, Game Changers Awards 2025.
- Port Lead, **PICO** and **Steam** ports — two-dev team in a 13-programmer studio; backend adapted per platform.
- Rebuilt the game as a third-person shooter for **Steam** in eight weeks, owning most design and technical decisions.
- Ran store releases and platform certification: Steamworks integration; PICO submitted, reviewed and approved.
- Led the 3-developer Fish-Networking team while the project migrated to Photon Quantum 3's deterministic ECS.
- Built MR spatial anchoring and a custom anchor space, then replaced both with a simpler camera-based system.
- Cut build size from ~1.5 GB to under 500 MB with Addressables, meeting the Android XR size requirement.
- Eliminated level-load freezes and world-builder stutter; met PICO's 15-second cold-start requirement.
- Built the team's release pipeline in-editor: config swap, Addressables, builds, upload and Discord notifications.
- Built debug and level-design tools; reviewed code and shaped shared coding standards.

Unity · C# · ECS · Meta XR SDK · Fish-Networking · Photon Quantum 3 · Addressables · .NET backend · Multithreading

Patch Notes UG opror.io

Jul 2020 – Mar 2023

Unity Developer — core gameplay & UI on **Opror** (F2P multiplayer auto-chess)

Germany — Remote

- Architected reactive gameplay systems with UniRx, replacing polling-heavy code across core gameplay.
- Built editor tools and content pipelines so designers could ship cards without engineering time.

Unity · C# · UniRx · Editor Tools · Addressables · ScriptableObjects · Git

Freelance

2019 – 2020

Unity Developer

Argentina — Remote

- Ported a tower-defense game from iOS/Swift to Android in Unity; built mobile games for external clients.

SELECTED PROJECTS

OnDemand Queue — commercial Unity Asset Store package: scheduling for delayed, timed and repeating method calls.

A Day with Arcueid — visual novel built on **Paradox Engine**, my Unity node-graph toolkit that lets writers author without code.

EDUCATION & LANGUAGES

Da Vinci Multimedia Art School

Virtual Simulators Designer & Programmer

2016 – 2019 · 3 of 4 years completed.

Universidad de Buenos Aires

Image & Sound Design

2013 – 2015 · Not completed.
