EXPERIENCE

- Eggscape Entertainment Inc.

Senior Unity Developer · Port Lead (PICO & Steam) — EGGSCAPE

May 2023 – Jul 2026

Argentina — On-site, later hybrid

- Added and improved features across **gameplay**, **UI** and world building on the Meta Quest release. **Main developer of the camera system**, the modular world-builder base systems, and the spatial anchors for the location-based edition shown at **GDC 2024**.
 - Port Lead** for the **PICO** and **Steam** releases in a two-dev team, also supporting the **Android XR** adaptation. Handled Steamworks integration and took PICO through submission, optimization and approval.
 - Adapted **EGGSCAPE** into a third-person PC shooter for **Steam** in eight weeks on the same codebase, centred on the shooting combat. Enhanced graphics and UI, reworked gameplay, added quality-of-life fixes and closed bugs open in the XR version.
 - Led a small team through the months-long migration from **Fish-Networking** to **Photon Quantum 3**, while maintaining the C# backend of a live early-access build.
 - Implemented the full **Addressables** workflow with an entity and view split for **Photon Quantum 3**, where the simulation spawns viewless entities that load their views on demand and wire them through a config parser. Cut build size and load time.
 - Developed debug and testing tools, and an in-editor release pipeline for config swap, Addressables, builds, upload and Discord notifications.
- Patch Notes UG

Unity Developer — Oprør

Jul 2020 – Mar 2023

Germany — Remote

- One of two programmers on the Unity client, on a server-authoritative game with all logic on the backend. Built the **UI** and the player interactions that drive gameplay, consuming server ticks with reactive programming in **UniRx**.
 - Integrated a **gITF** loader for the 3D models delivered by the backend.
 - Built an editor tool where designers configured units, attributes, animations and animation effects, exporting to YAML that the backend served back to the game. Made small changes to the **Rust** backend to consume it.
- Freelance

Game Developer

2019 – 2020

Argentina — Remote

- Early freelance work on small projects. Ported an iOS 2D tower-defense game from source code (Swift) and fragmented documentation to Android in Unity, built an Android 3D clicker, and worked on an Unreal Engine 3 (UDK) game.

EDUCATION & LANGUAGES

Da Vinci Multimedia Art School

Virtual Simulators Designer & Programmer

2016 – 2019 · 3 of 4 years completed.

Universidad de Buenos Aires

Image & Sound Design

2013 – 2015 · Not completed.
